

GC32 CLASS RULES 2016 - BUILDER SPECIFICATION UPDATE NO 1

This update and information is given in accordance of the GC32 Racing Rules V1.3

New traveller line end stop on aft beam

According to the discussion we had at the technical meeting in Marseille on the 29th of September 2016 the builder has developed a new end stop system for the traveller line on the aft beam.

The old system with **2 x 27mm ESP End Control Dead-End 3:1** on the traveller track the has been replaced by **2 x 27mm Track Endstops** and **2 x 14.14 Antal Deck Ring** mounted on the aft beam with a carbon back plate. The 14.14. Deck Ring have to be mounted according to the drawing below.

All boats from build no 12 onward are supplied with the new traveller line end stop system. This system shall not be changed. Older boats are allowed to used their originally supplied system or can upgrade to the new system according to the builder specification and detailed drawings.

Photos of both systems on the following page.
